UNITY GLOBAL CARE INC. AND
MEDWAND FORGE STRATEGIC
PARTNERSHIP TO DELIVER
PROACTIVE, DATA-DRIVEN
HOME CARE INSIGHTS FOR
AGING ADULTS

PRESS RELEASE

FOR IMMEDIATE RELEASE

Unity Global Care and MedWand Solutions Join Forces to Help Home Care Agencies Detect Risk Earlier, Improve Client Outcomes, and Scale Compassionate Care

Flemington NJ, August 12, 2026: Unity Global Care, the developer of ALBERTai, an AI-powered aging intelligence platform and ecosystem built on multi-patent pending technology, today announced a strategic partnership with MedWand Solutions, a medical technology company extending the reach of the clinical exam through a multi-sensor platform designed to connect patients and providers from virtually anywhere. Together, Unity Global Care and MedWand will equip home care agencies with an integrated, data-driven solution to deliver proactive, continuous care monitoring for aging adults living independently at home.

The partnership comes at a critical inflection point for the home care industry. More than 63 million seniors currently receive professional home care in the United States, and 87% of adults 65 and older prefer to remain in their own homes as they age. With projected home care spending expected to reach

\$275 billion by 2030 and approximately 10,000 Americans turning 65 each day, agencies are under extraordinary and growing pressure to meet demand with resources that have not kept pace. Meanwhile, the caregiving workforce is stretched, families are overwhelmed, and the existing model of reactive, fragmented care is no longer sufficient to address the scale and complexity of the aging crisis unfolding across the country and around the world.

Combining Two Powerful Platforms into One Proactive Unity Care Hub

At the heart of the partnership is the integration of Unity Global Care's ALBERTai intelligence platform, powered by its proprietary Aging-in-Place Score® (AIP Score), with MedWand's Virtual Care platform. The solution combines traditional assessment tools with Bluetooth-enabled vital capture and remote patient evaluations to enhance efficiency, convenience, and access to care for the aging population. MedWand also supports advanced telemedicine solutions across multiple settings, including home care nursing teams, acute rehabilitation facilities, remote patient clinics, and physician telemedicine visits.

The vital sign data gathered through the MedWand device flows into Unity Global Care's ALBERTai intelligence layer, where it is synthesized alongside caregiver observations, family engagement inputs, health and wearables, home safety monitoring technologies and agency operational data to generate the Aging-in-Place Score. This unified and validated predictive metric helps home care agencies and families understand what is changing, why it matters, and what action to take next. The AIP Score is holistic by design, integrating functional wellbeing, care team influence, and environmental safety into a single interpretable signal. Because it is predictive rather than reactive, it identifies early risk trajectories before a crisis occurs, learning from longitudinal trends over time instead of relying on point-in-time snapshots, and translating complex, multi-source data into clear, actionable guidance for agencies, caregivers, and families.

From Reactive to Proactive: A New Standard of Care

By combining MedWand and ALBERTai, home care agencies can move from reactive to proactive care delivery. The integrated solution is designed to detect early indicators of decline, fall risk, or changes in health status before a crisis occurs and before a family reaches a breaking point. Through Unity's real-time Care Dashboard, agencies can visualize the stability of every client across their full census using a insight reporting priority approach. Detailed insights

accompany each change in score to explain the underlying reasons, helping care teams respond with speed, confidence, and purpose. ALBERTai also provides AI-driven care plan recommendations that can be reviewed and shared directly with families and key contacts.

The partnership also strengthens referral relationships that are essential to home care agency growth. Hospitals, rehabilitation facilities, and healthcare partners increasingly require evidence that clients discharged home remain visible, monitored, and supported. Through ALBERTai's structured reporting suite, which includes Client Stability Reports, Aging-in-Place Score Trend Reports, High Risk Client Alert Reports, Fall Risk and Safety Monitoring Reports, Post-Discharge Monitoring Reports, and Caregiver Observation Summaries, agencies can demonstrate measurable, documented oversight that builds trust and reinforces referral partnerships over time.

For home care agencies, this integrated partnership translates directly into earlier risk identification through continuous monitoring, improved client retention through proactive and visible oversight, stronger referral relationships through shareable and structured client trend data, and greater operational efficiency through AI-driven prioritization and workflow support, along with a meaningful competitive differentiator in an increasingly demanding marketplace.

David S. DuPlay, Co-Founder, President & Chief Executive Officer of Unity Global Care Inc., stated: "The mission of Unity Global Care has always been to change the way the world ages, not with good intentions alone, but with real intelligence, real data, and real action. Our partnership with MedWand is a powerful step forward in that mission. MedWand has built something genuinely remarkable: a remote patient monitoring solution set combined with telemedicine and designed from the ground up for older adults that captures the kind of continuous, meaningful vital sign data that ALBERTai was built to transform into insight.

Together, we are giving home care agencies the ability to see what was previously invisible, the subtle but critical changes in how an aging adult moves, sleeps, and lives day to day and to act on those signals before a fall, a hospitalization, or a loss of independence occurs. This is not simply a technology integration. This is a commitment to the families, caregivers, and agencies on

the front lines of the aging crisis, and to the aging adults who deserve to live with dignity, safety, and independence in the place they love most: home."

Todd Cornell, Chief Executive Officer of MedWand, commented, "MedWand was built on a simple but powerful conviction: that independence for seniors, peace of mind for families, and data-driven care for providers are not competing goals, they are the same goal, achieved together. We designed every element of MedWand to meet older adults where they are, with technology that is effortless to use, and rich in the kind of vital sign data that truly matters clinically and operationally. Partnering with Unity Global Care and ALBERTai takes everything we have built to an entirely new level. By integrating our remote monitoring capabilities into Unity's intelligent Unity Care Hub, we are giving home care agencies something they have never had before: a complete, living picture of their clients' wellbeing, and the predictive intelligence to act on it proactively. This is the future of home care, and we are proud to be building it together."

A Shared Vision for the Future of Home Care

The Unity Global Care and MedWand partnership is designed for immediate deployment within home care agencies and national franchise networks, with a scalable model that can grow alongside agency census. MedWand's Remote Monitoring Solution is already serving customers across the United States and international markets. Unity Global Care's ALBERTai ecosystem provides the intelligence infrastructure, referral reporting suite, Aging-In-Place Score and operational coordination layer that enables agencies to translate continuous data into demonstrably better outcomes for clients, stronger trust with referral partners, and sustainable competitive advantage in a rapidly evolving market.

Guided by a distinguished Medical Advisory Board that includes Dr. Thomas M. Gill of Yale School of Medicine and Dr. Sara J. Czaja of Weill Cornell Medicine, Unity Global Care brings both clinical credibility and entrepreneurial vision to this partnership. Together, Unity Global Care and MedWand are committed to helping home care and home health agencies not only meet the demands of today's aging crisis, but lead through it with clarity, compassion, and intelligence.

About Unity Global Care Inc.

Unity Global Care is the developer of ALBERTai, an AI-powered aging intelligence platform and ecosystem purpose-built for the home care industry. Anchored by the proprietary and multi patent-pending Aging-in-Place Score® (AIP Score), ALBERTai transforms fragmented caregiver observations, client assessments, family engagement inputs, and operational data into predictive insights and coordinated action. Unity Global Care's integrated ecosystem includes AI-driven operational tools, recruitment infrastructure, referral relationship reporting, a B2C-to-B2B client acquisition engine, and the All Things Aging Marketplace. About MedWand

MedWand is the ultimate healthcare solution, seamlessly integrating traditional tools and Bluetooth connectivity for vitals capture and remote patient evaluations to enhance efficiency, convenience, and access to care. Created by a team of physicians and engineers to enhance the quality and accessibility of healthcare services regardless of physical location, MedWand is a sensor based medical device that assists clinicians in providing a comprehensive patient assessment from any location. The company offers advanced telemedicine solutions for multiple applications that include hospitals, remote clinics, nursing homes, schools, and workplaces. For more information visit www.MedWand.com | TCornell@medwand.com.
